

Software Carpentry Bootcamp, Saint Mary's University, Halifax, NS, July 2-3, 2014

We are running a Software Carpentry bootcamp here at Saint Mary's University, Halifax, NS, on July 2-3, 2014, and would like to invite you to attend. Software Carpentry's aim is to teach researchers basic computing concepts and skills so that they can get more done in less time, and with less pain. Our typical curriculum includes task automation, modular programming, version control, and software testing, and our instructors are working scientists like yourselves.

Software Carpentry's teaching is hands-on, so participants are required to bring their own laptops. (We will provide instructions on setting up the required software several days in advance.) You will also be asked to complete a pre-bootcamp assessment as part of the registration process so that instruction can be tailored to your needs and skills.

To register, please go to: <http://smu-swc-2014.eventbrite.ca> The cost for the bootcamp is only \$20. We encourage participants to sign up in pairs or groups; past experience suggests that participants benefit more from bootcamps when they come as a team.

For information about this bootcamp in particular see: <https://dhavide.github.io/2014-07-02-smu/>.

And for information about Software Carpentry see: <http://software-carpentry.org/>.

If you have any questions about this bootcamp, email admin@software-carpentry.org.

We look forward to seeing you there!

Thanks,

Paul Muir and Andrew Valencik, Mathematics and Computing Science, Saint Mary's University.

The organizers acknowledge support from AARMS, the Atlantic Association for Research in the Mathematical Sciences, and from Saint Mary's University.
