

MUN Seminar - The Future of Networks in Research and Education

High speed networks are indispensable to modern-day research and education, enabling global collaboration, providing immediate access to huge knowledge bases and permitting new research approaches which were previously unattainable. Our increasingly important Research and Education networks will soon benefit from significant technological evolution which will further strengthen their capabilities and broaden their reach.

Canada's national Research and Education network – CANARIE, and Newfoundland's regional affiliate, ACORN-NL are hosting an event at Memorial University to discuss these developments and in conjunction with industry representatives from Cisco and Bell Aliant, present the future vision of how Research and Education networking will strengthen Newfoundland and Labrador's innovation capacity.

9:00 – 10:30: Experts from Memorial University and Cisco Systems will present a future vision for the regional network and its linkage to the national network. The business benefits of new IPv6 technologies will be discussed in the context of the continued growth of these networks and the support they provide to research and education.

10:45-1:00pm: Two presentations with a more in-depth technical discussion of IPv6. What it is and what it will mean to networks and future applications to research and education. How the technology will affect existing activities and how it can be leveraged to extend the reach of collaboration and access to resources.

The event will be held on **March 22nd, 9:00 a.m. to 1:00 p.m.** at the Beatrice Watts boardroom in the Inco Innovation Center (Room IIC-2014).

Space is limited, to reserve your seat please send an RSVP to jwaustin@mun.ca or call (709) 864-4488
